Me

We are on it. I will send you an update to test the app also as soon as possible.

Thanks for your patience.

Me

Hello,

We are pleased to inform you that both the Admin Dashboard and the Android APK are ready for testing.

You can use the Admin Dashboard to manage and update the data, and the APK file to test the application directly on your Android device.

APK file provided – can be installed on Android devices to add and test data directly.

Admin Dashboard Link:
<https://admin.luxwash.co/>

Admin Credentials:
<https://docs.google.com/document/d/1sm279JIT5Dsd0nG3n77ckg9rRS5EEcQKlEwME8t0t8/edit?usp=sharing>

Please review everything carefully. If you notice any issues or need any changes, kindly let us know and we will make all the required updates promptly.

Thank you

Hi

the admin link is not working

Me

Let me have a look and fix it.

Me

Hi,

It looks like your VPS is offline again. Could you please turn the VPS back on and contact your hosting support to find out why this keeps happening?

Each time the VPS goes offline, we need to redeploy the system and perform additional setup again, which creates extra work on our side and delays the progress. It would be best to resolve the root cause so the server stays stable.

Please let me know once the VPS is back online.

Thank you

freshiest_cwash

You guys recommend me using Hostinger so what do you think could be the problem?

Me

I guess the problem is with the server with Hostinger. Please contact the Hostinger support and they will resolve the issue.

freshiest_cwash

I have the found the way to give you access

What email do you want to use?

Me

Me Feb 16, 8:40 PM

Hi, It seems that your VPS is currently turned off, and we are unable to access it at the mom...

You can check this document to share access

freshiest_cwash

You should receive a email soon regarding access

Me

Okay, I will check

Me

Hi there,

We have successfully regained access to your VPS and have redeployed the backend and application.

Everything is now up and running.

Please check the app and the admin dashboard from your side and let us know your feedback. If you face any issues or notice anything unusual, feel free to inform us – we'll fix it immediately.

Thank you.

freshiest_cwash

Hi

The vps got shutdown again because of abuse

freshiest_cw

What is that?

Why?

freshiest_cwash

This is what they told me: Your VPS is suspended due to enormous resource usage (typically very high CPU/RAM), which impacts other customers on the same node. Recently, this is often caused by a NextJS/react vulnerability that can trigger runaway CPU usage.

To prevent it from happening again, you need to:

Update Next.js to one of: 15.0.5, 15.1.9, 15.2.6, 15.3.6, 15.4.8, 15.5.7, 16.0.6

Or, if you use another framework with React Server Components, update React to: 19.01, 19.12, 19.2.

Then clean the server (restore a clean backup or reinstall the server).

Me

Please give me some time to discuss with my team and after that I'll get back to you.

Me

Hi,

No worries , we will resolve the VPS issue and update everything properly to prevent this from happening again.

The app and dashboard are already shared with you. Please review them and let us know your feedback.

Thank you.

Hi, we will need to schedule a meeting because the server can't stay up every time you deploy it we need to find a solution because as of right now the vps stopped again

Me

Hello,

Let's have a meeting after 8 hours from now

freshest_cwash

Hi,

I wanted to update you on an important security incident that occurred on our LuxWash VPS server and the changes we've made as a result.

What Happened:

Our VPS was compromised by an automated brute force attack originating from IP 103.1618.1. The attacker gained access through SSH password login and installed a crypto mining program (XMRig) that was using our server's CPU to mine Monero cryptocurrency. This triggered a CPU limitation from Hostinger. The attack started around February 23rd and was discovered and fully resolved on February 27th.

What We Did:

- Terminated the mining process and removed all associated malware files
- Removed all malicious cron jobs and persistence mechanisms
- Disabled SSH password authentication completely
- Switched to SSH key-based authentication only
- Enabled UFW firewall and blocked the attacker's IP permanently
- Installed Fail2Ban to prevent future brute force attacks
- Reduced Hostinger's cloud firewall
- Connected the domain to Cloudflare for DDoS protection and WAF
- Restricted ports 80 and 443 to Cloudflare IPs only

Your Access:

Because we disabled password login for security reasons, you will no longer be able to access the server using a password. To regain access you will need to send me your SSH public key and I will add it to the server.

To generate your SSH key, run this command on your computer:

```
ssh-keygen -t ed25519 -C "your-name"
```

Then send me the contents of your public key file:

- Windows: type C:\Users\YourName\ssh\id_ed25519.pub
- Mac/Linux: cat ~/.ssh/id_ed25519.pub

It will look like: ssh-ed25519 AAAA... your-name

Please send me that key as soon as possible so I can restore your access.

The app (backend and frontend) was not affected and is running normally.

Let me know if you have any questions.

Best regards,

Me

Let me go through it and get back to you.

Hi, I don't what you guys did but they have suspend the vps. I asked you guys to be careful and you ignore it..

Me

Let me check again

freshiest_cwash

The vps is no longer available

Me

Allow me some time to check it properly
